

# Environment policy

Visy's commitment to sustainable development means we take a whole of product lifecycle approach to ensure our activities, products and services enhance the environment in the communities in which we operate.

We work with customers, suppliers and service providers, governments, and the community to develop innovative products, recycling solutions and services that:

- reduce waste and promote the circular economy for resources;
- minimise greenhouse gas emissions to improve climate resilience;
- consider and minimise the lifecycle impacts of our products and activities;
- source sociably responsible and sustainable products and services;
- efficiently utilise natural resources and reduce biodiversity impacts; and
- protect and prevent any adverse impacts to the environment.

Within our own operations we will:

- remain informed about the legal, internal, and external factors which influence our environmental performance to ensure we comply with all applicable environmental laws, regulations, and standards, as well as our voluntary commitments to our communities and stakeholders;
- operate plant, equipment and systems to minimise environmental risks;
- influence upstream or downstream processes, including for outsourced activities such as transport and waste disposal and the procurement of goods and services, to apply best practice environmental principles;
- use natural resources including water and energy responsibly to minimise the environmental impacts of our manufacturing processes;
- promote environmental sustainability of our fibre inputs through maintaining the PEFC and FSC certification of our paper products;

- reduce our carbon emissions through energy efficiency and the use of cleaner energy technologies;
- manage environmental hazards under the Visy Integrated Management System to plan, document, measure and monitor environmental performance, including setting, assessing, and reviewing the environmental objectives;
- engage at all levels of the organisation and with other stakeholders to communicate this policy and key aspects of the Visy Management System, as well as making this policy available to the public; and
- continually improve performance through training, management review, research and development, and consultation with government bodies, communities, industry groups, customers and other stakeholders.

We are committed to continually improving our environmental performance and minimising our impacts on the external environment, and it is the responsibility of all levels of the organisation to give effect to these values.
